Subject Index

Analysis of the base-excited response of inlet-outlet towers by a Green's function approach 43
Antenna rotating in a cross flow, wind tunnel tests of a 345

Bridge deck overlay design criteria, nonlinear analytical RC-models for the development of 97
Bridge design, an approach to 106
Bridges, recent developments in the design and construction of substructures for over-water 91
Bridges, verification of load distribution and strength of segmented post-tensioned concrete 113

Cable-stayed bridge, resonance-search tests on a small-scale model of a 59
Column supported towers, studies of 310
Concrete structures, nonlinear finite element analysis of reinforced and prestressed 211
Control, experimental active 242
Cooling towers in conditions of aerodynamic interference, quasi static computational approach to wind load on 317
Cooling towers, in extremely severe earthquake conditions, the design of 13
Cooling towers, on soils, gust factors for 21
Cooling towers subjected to uneven settlements with stochastic characteristics, stress evaluation of 329
Cooling towers to earthquake loading, response of hyperbolic 230

Design and construction of substructures for over-water bridges 91
Design of cooling towers in extremely severe earthquake conditions 13
Design problems of long span spatial structures 144
Dynamic response of liquid storage tanks, effects of wall flexibility on 253

Earthquake conditions, the design of cooling towers in extremely severe 13
Earthquake loading, response of hyperbolic cooling towers to 230
Elastic predictions of pressures in conical silo hoppers 2
Experimental study on seismic behaviour of viscoelastically damped structures 75

Finite element analysis of reinforced and prestressed concrete structures, nonlinear 211
Fire conditions, modelling steel frame behaviour under 371
Free vibrations of structural systems with stochastic coefficients 54

Gust factors for hyperbolic cooling towers on soils 21

Inflatable booms and pneumatic hinges: an application in deployment of satellite sensors 357

Linear analysis of tall buildings using spline elements 27
Load distribution and strength of segmental post-tensional concrete bridges, verification of 113
Long span tension structures, recent advances in the field of 164

Modelling of wind pressures on monoslope roofs 281
Modelling steel frame behaviour under fire conditions 371
Models for the development of bridge deck overlay design criteria, nonlinear analytical RC- 97

Nonlinear modelling of weld-beaded composite tabular connections 34

Preliminary studies into the behaviour of knee braced frames subject to seismic loading 67
Programming approach to safety assessment, an object-oriented 351

Resonance-search tests on a small-scale model of a cable-stayed bridge 59
RC shells, on shape finding methods and ultimate load analyses of RC shells 178
RC shells, progress analysis and design of 128
RC shells, reflections on the behaviour of 199

Safety assessment, an object−oriented programming approach to 351
Satellite sensors, inflatable booms and pneumatic hinges: an application in deployment of 357
Seismic behaviour of viscoelastically damped structures, an experimental study on 75
Seismic loading, preliminary studies into the behaviour of knee braced frames subject to 67
Shape finding methods and ultimate load analyses of RC shells 178
Silo hoppers, elastic predictions of pressures in 2
Single-equation yield surfaces for monosymmetric and asymmetric sections 366
Spatial structures, design problems of long span 144
Stability of battened columns with and without taper 237
Steel frame behaviour under fire conditions, modelling 371
Storage tanks, effects of wall flexibility on the dynamic response of liquid 253
Structural systems with stochastic coefficients, free vibration of 54

Tall buildings, using spline elements, linear analysis of 27
Towers by a Green's function approach, analysis of the base-excited response of inlet-outlet 43
Towers, studies of column supported 310
Tubular connections, nonlinear modelling of weld-beaded composite 34

Wind-induced accelerations of a building: a case study 268
Wind loading on a plate, estimation of torsional 293
Wind load on cooling towers in conditions of aerodynamic interference, quasi-static computational approach to 317
Wind pressures on monoslope roofs, modelling of 281
Wind-tunnel tests on a model antenna rotating in a cross flow 345
